Forest products conversion factors provides ratios of raw material input to the

output of wood-based forest products for 37 countries of the world. Analysts, policymakers, forest practitioners and forest-based manufacturers often have a need for this information for understanding the drivers of efficiency, feasibility and economics of the sector. In addition, conversion factors are often needed to convert from one unit of measure to another. The publication also includes explanations on the units of measure, the drivers of the ratios, as well as information on physical properties of wood-based forest products. Finally, where reported factors were unavailable, factors from other sources are given. Reprint of the original, first published in 1871. Vicky Van is a nickname for Victoria Van Allen, an enigmatic woman of, apparently, higher society, who keeps her past secret but is open to make new friends and acquaintances. She organizes bridge parties in her saloon, which are attended by prominent people. Once, one of her guests is found murdered, and Vicky vanishes before the police are summoned. Yet, her neighbor, Chester Calhoun, believes Vicky is innocent. The investigation of the murder brings a lot of twists and an unexpected finale.
