Vols. 30-54 (1932-46) issued in 2 separately paged sections: General editorial section and a Transactions section. Beginning in 1947, the Transactions section is continued as SAE quarterly transactions. Covers domestic private and public companies and includes hard-to-find data such as sales, employee figures, and names and titles of executive officers where available. Vols. for 1970-71 includes manufacturers' catalogs. Although Native Americans have lived along the banks of the Occoquan for thousands of years, John Smith was the first European to visit the area, arriving at the river's mouth in 1608. Here he encountered the Dogue Indians, from whose language the river and town take their names. With the coming of settlers, Occoquan's location at the meeting of the Tidewater and Piedmont made it ideal for water-related industry and

commerce. By the end of the 18th century, it boasted one of the first automated gristmills in the nation. During the Civil War, Occoquan housed both Union and Confederate troops and was the sight of several small engagements. In 1972, the river, which had provided so many commercial and recreational benefits, revealed a more dangerous side as flooding from Hurricane Agnes caused severe damage. The people of Occoquan rebuilt, and the town evolved into the wonderful mixture of old and new that gives it the unique character seen today. The energy industry is boiling over with changes. Deregulation, new opportunities in foreign fields and markets and environmental challenges are rushing together head-on to shape the energy and utilities business of the future. Extremely deep offshore wells in the Gulf of Mexico and offshore of West Africa are being drilled at immense cost. Meanwhile China has become a major energy importer and Russia has become a major exporter. In the U.S., Europe and Japan, renewable and alternative energy sources are developing quickly, including big breakthroughs in wind power and fuel cells. This exciting new reference book covers everything from major oil companies to electric and gas utilities, plus pipelines, refiners, retailers, oil field services and engineering. Petroleum topics include upstream and downstream. Additional topics include coal, natural gas and LNG. More than a dozen statistical tables cover everything from energy consumption, production and reserves to imports, exports and prices. Next, our unique profiles of the Energy 500 Firms are also included, with such vital details as executive contacts by title, revenues, profits, types of business, web sites, competitive advantage, growth plans and more. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling

key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled. This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set. Includes: Products & services, Company profiles and Catalog file. Includes advertising matter. MATHEMATICAL APPLICATIONS FOR THE MANAGEMENT, LIFE, AND SOCIAL SCIENCES, 11th Edition, is intended for a two-semester applied calculus or combined finite mathematics and applied calculus course. The book's concept-based approach, multiple presentation methods, and interesting and relevant applications keep students who typically take the course-business, economics, life sciences, and social sciences majors-engaged in the material. This edition retains the book's real-life context by adding to and updating the substantial number of applications. It also continues the focus on modeling, with modeling problems now clearly labeled in the examples. A brief review of algebra prepares students with different backgrounds for the material in later chapters. In the twenty-first century, the world is on the brink of a scientific renaissance, about to birth a future where space has become privatized and the moon transforms into a fertile commercial ground. As former astronaut Paul Stavenger works to turn a handful of abandoned government moon shelters into a full-fledged moonbase, powerful corporate lobbies align against him. Against the neo-Luddites is Masterson Aerospace, a company funding and creating major scientific

breakthroughs. But Masterson is nearly crippled when its CEO commits suicide and his wife, Joanna, backs her lover Paul Stavenger, the former astronaut, over her mentally unbalanced son Greg in the board election that follows her husband's death. So begins a power struggle that leads to murder and the ultimate conflict over Moonbase. "Ben Bova is trying to make us grow up . . . There's certainly enough techie ornamentation, both in theory and in plausible practice, to satisfy the pocket-protector crowd, but there's also more, and better developed, conflict among characters than many folks would expect." —The San Diego Union-Tribune It then describes how that venture initially paid off, as the influx of thousands of people from the North and the surrounding Virginia countryside helped make Roanoke - presumptuously christened the "Magic City" by New South proponents - the state's third-largest city by the turn of the century. Rand Dotson recounts what life was like for Roanoke's wealthy elites, working poor, and African American inhabitants. He also explores the social conflicts that ultimately erupted as a result of well-intended reforms initiated by city leaders. Dotson illustrates how residents mediated the catastrophic Depression of 1893 and that year's infamous Roanoke Riot, which exposed the facade masking the city's racial tensions, inadequate physical infrastructure, and provincial mentality of the local populace. Dotson then details the subsequent attempts of business boosters and progressive reformers to attract the additional investments needed to put their city back on track.
